Basic

Chapter 4

Numbers, maths and input()

Let the customer type, and let Python do the maths.

In these notes

- ✓ Maths operators: + - * / // % **
- ✓ Order of operations
- ✓ input() and why it gives text
- ✓ Converting with int(), float(), str()

The chai shop story

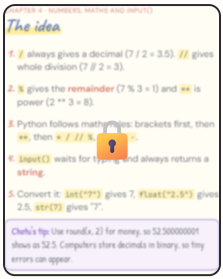

A customer orders 7 cups. Raju packs them in trays of 3. How many full trays? How many cups are left over? What's the bill with 5% tax? Raju used to do this on paper. Now Python does it instantly, and even asks the customer how many cups they want.

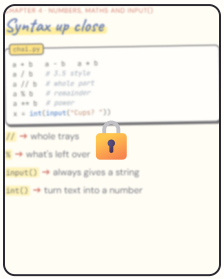

Remember: Let the customer type, and let Python do the maths.

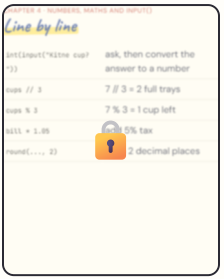

CHAPTER 4

Sneak peek: the rest of this topic

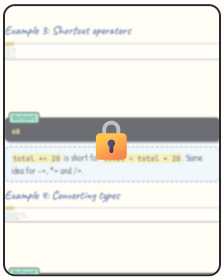

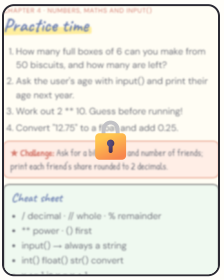

Inside the full book:

- The idea, explained simply
- Syntax up close
- Two worked examples + real output
- Line-by-line walkthrough
- Common mistakes and fixes
- Practice + challenge
- Answers + cheat sheet

Liked the preview?

The complete **Python with Chai** book has all 20 topics in 200 handwritten pages: the idea, syntax, worked examples, line-by-line walkthroughs, common mistakes, practice with answers and a cheat sheet for every topic.
